

The 5th National Scientific Conference Family - Work
September 24-25, 2018, University of Lodz, Poland

This year's theme is

"Family - education - work in search of wellbeing".

The aim of the conference is to exchange the research experiences regarding positive human functioning in the main spheres of its activity, i.e. in the family, education and work.

Family and work are the most important and interdependent areas of human life. The work determines the economic foundations, the well-being of the family. The family is the most important source of support for people, guaranteeing effective functioning also in the professional sphere.

The research clearly indicates that job satisfaction and family happiness are affected human well-being. However, the necessity to make many important decisions, perform numerous tasks in a limited time perspective and the climate of mobility are not conducive to life satisfaction. Therefore, searching personal resources and those related to the functioning of the family system and organizations that may be about coping with difficulties becomes indispensable.

In the 5th edition of the conference, family and work were accompanied by education. In addition to the necessary and currently popular adult education, it is also worth paying attention to inclusive education and well-being at school, which requires the cooperation of a parent, teacher and student. This is due to the need to treat the family, professional and educational system as interactive. This may not only determine the effectiveness of education, but also the life satisfaction of everyone involved in this process.

We invite researchers, practitioners and all persons interested in the conference issues to exchange experiences and discussions.
